

is delighted to invite you to the following **workshop**

How Technology Meets the Multiple Intelligence Needs of an Adolescent ELT Class

Salerno, 12 April 2010 - 16.00-18.00 - Liceo Sperimentale Statale "Alfano 1", via dei Mille

L'incontro è organizzato da Pearson Italia, ente accreditato quale soggetto che offre formazione al personale della scuola (A00DGPER12676).
Verrà quindi rilasciato l'attestato di partecipazione.

Until recently technology in ELT classroom has been largely confined to the language lab, which has limited its impact.

This session shows how to integrate technology into the everyday classroom, to improve

- student focus
- behaviour and contribution to the lesson

as a result of meeting the multiple intelligences and learning styles of an average multilevel class.

In order to effectively reach a class of digital natives we don't need to change what we teach, or how we teach, but rather vary the tools with which we teach. The interactive whiteboard is now becoming ever more commonplace in schools and it is exactly this tool which will help us to reach this generation of digitally native students.
